Introduction to automation for ONTAP and vSphere

VMware automation

Automation has been an integral part of managing VMware environments since the first days of VMware ESX. The ability to deploy infrastructure as code and extend practices to private cloud operations helps to alleviate concerns surrounding scale, flexibility, self-provisioning, and efficiency.

Automation can be organized into the following categories:

- **Virtual infrastructure deployment**
- **Guest machine operations**
- **Cloud operations**

There are many options available to administrators with respect to automating their infrastructure. Whether through using native vSphere features such as Host Profiles or Customization Specifications for virtual machines to available APIs on the VMware software components, operating systems, and NetApp storage systems; there is significant documentation and guidance available.

Data ONTAP 8.0.1 and later supports certain VMware vSphere APIs for Array Integration (VAAI) features when the ESX host is running ESX 4.1 or later. VAAI is a set of APIs that enable communication between VMware vSphere ESXi hosts and storage devices. These features help offload operations from the ESX host to the storage system and increase network throughput. The ESX host enables the features automatically in the correct environment. You can determine the extent to which your system is using VAAI features by checking the statistics contained in the VAAI counters.

The most common starting point for automating the deployment of a VMware environment is provisioning block or file-based datastores. It is important to map out the requirements of the actual tasks prior to developing the corresponding automation.

For more information concerning the automation of VMware environments, see the following resources:

- [The NetApp Pub](#). NetApp configuration management and automation.
- [The Ansible Galaxy Community for VMware](#). A collection of Ansible resources for VMware.
- [VMware {code} Resources](#). Resources needed to design solutions for the software-defined data center, including forums, design standards, sample code, and developer tools.

vSphere traditional block storage provisioning with ONTAP

VMware vSphere supports the following VMFS datastore options with ONTAP SAN protocol support indicated.

VMFS datastore options	ONTAP SAN protocol support
Fibre Channel (FC)	yes
Fibre Channel over Ethernet (FCoE)	yes
iSCSI	yes

VMFS datastore options	ONTAP SAN protocol support
iSCSI Extensions for RDMA (iSER)	no
NVMe over Fabric with FC (NVMe/FC)	yes
NVMe over Fabric with RDMA over Converged Ethernet (NVMe/RoCE)	no

If iSER or NVMe/RoCE VMFS is required, check SANtricity-based storage systems.

vSphere VMFS datastore - Fibre Channel storage backend with ONTAP

About this task

This section covers the creation of a VMFS datastore with ONTAP Fibre Channel (FC) storage.

For automated provisioning, use one of these scripts: [\[PowerShell\]](#), [Ansible Playbook](#), or [\[Terraform\]](#).

What you need

- The basic skills necessary to manage a vSphere environment and ONTAP
- An ONTAP storage system (FAS/AFF/CVO/ONTAP Select/ASA) running ONTAP 9.8 or later
- ONTAP credentials (SVM name, userID, and password)
- ONTAP WWPN of host, target, and SVM and LUN information
- [The completed FC configuration worksheet](#)
- vCenter Server credentials
- vSphere host(s) information
 - vSphere 7.0 or later
- Fabric switch(es)
 - With connected ONTAP FC data ports and vSphere hosts
 - With the N_port ID virtualization (NPIV) feature enabled
 - Create a single initiator single target zone.
 - Create one zone for each initiator (single initiator zone).
 - For each zone, include a target that is the ONTAP FC logical interface (WWPN) for the SVMs. There should be at least two logical interfaces per node per SVM. Do not use the WWPN of the physical ports.
- An ONTAP Tool for VMware vSphere deployed, configured, and ready to consume.

Provisioning a VMFS datastore

To provision a VMFS datastore, complete the following steps:

1. Check compatability with the [Interoperability Matrix Tool \(IMT\)](#)
2. Verify that the [FCP Configuration is supported](#).

ONTAP tasks

1. [Verify that you have an ONTAP license for FCP.](#)
 - a. Use the `system license show` command to check that FCP is listed.
 - b. Use `license add -license-code <license code>` to add the license.
2. Make sure that the FCP protocol is enabled on the SVM.
 - a. [Verify the FCP on an existing SVM.](#)
 - b. [Configure the FCP on an existing SVM.](#)
 - c. [Create a new SVM with the FCP.](#)
3. Make sure that FCP logical interfaces are available on an SVM.
 - a. Use `Network Interface show` to verify the FCP adapter.
 - b. When an SVM is created with the GUI, logical interfaces are a part of that process.
 - c. To rename network interfaces, use `Network Interface modify`.
4. [Create and Map a LUN.](#) Skip this step if you are using ONTAP tools for VMware vSphere.

VMware vSphere tasks

1. Verify that HBA drivers are installed. VMware supported HBAs have drivers deployed out of the box and should be visible in the [Storage Adapter Information](#).
2. [Provision a VMFS datastore with ONTAP Tools.](#)

vSphere VMFS Datastore - Fibre Channel over Ethernet storage protocol with ONTAP

About this task

This section covers the creation of a VMFS datastore with the Fibre Channel over Ethernet (FCoE) transport protocol to ONTAP storage.

For automated provisioning, use one of these scripts: [\[PowerShell\]](#), [Ansible Playbook](#), or [\[Terraform\]](#).

What you need

- The basic skills necessary to manage a vSphere environment and ONTAP
- An ONTAP storage system (FAS/AFF/CVO/ONTAP Select) running ONTAP 9.8 or later
- ONTAP credentials (SVM name, userID, and password)
- [A supported FCoE combination](#)
- [A completed configuration worksheet](#)
- vCenter Server credentials
- vSphere host(s) information
 - vSphere 7.0 or later
- Fabric switch(es)
 - With either ONTAP FC data ports or vSphere hosts connected

- With the N_port ID virtualization (NPIV) feature enabled
- Create a single initiator single target zone.
- [FC/FCoE zoning configured](#)
- Network switch(es)
 - FCoE support
 - DCB support
 - [Jumbo frames for FCoE](#)
- ONTAP Tool for VMware vSphere deployed, configured, and ready to consume

Provision a VMFS datastore

- Check compatibility with the [Interoperability Matrix Tool \(IMT\)](#).
- [Verify that the FCoE configuration is supported](#).

ONTAP tasks

1. [Verify the ONTAP license for FCP](#).
 - a. Use the `system license show` command to verify that the FCP is listed.
 - b. Use `license add -license-code <license code>` to add a license.
2. Verify that the FCP protocol is enabled on the SVM.
 - a. [Verify the FCP on an existing SVM](#).
 - b. [Configure the FCP on an existing SVM](#).
 - c. [Create a new SVM with the FCP](#).
3. Verify that FCP logical interfaces are available on the SVM.
 - a. Use `Network Interface show` to verify the FCP adapter.
 - b. When the SVM is created with the GUI, logical interfaces are a part of that process.
 - c. To rename the network interface, use `Network Interface modify`.
4. [Create and map a LUN](#); skip this step if you are using ONTAP tools for VMware vSphere.

VMware vSphere tasks

1. Verify that HBA drivers are installed. VMware-supported HBAs have drivers deployed out of the box and should be visible in the [storage adapter information](#).
2. [Provision a VMFS datastore with ONTAP Tools](#).

vSphere VMFS Datastore - iSCSI Storage backend with ONTAP

About this task

This section covers the creation of a VMFS datastore with ONTAP iSCSI storage.

For automated provisioning, use one of these scripts: [\[PowerShell\]](#), [Ansible Playbook](#), or [\[Terraform\]](#).

What you need

- The basic skills necessary to manage a vSphere environment and ONTAP.
- An ONTAP storage system (FAS/AFF/CVO/ONTAP Select/ASA) running ONTAP 9.8 or later
- ONTAP credentials (SVM name, userID, and password)
- ONTAP network port, SVM, and LUN information for iSCSI
- [A completed iSCSI configuration worksheet](#)
- vCenter Server credentials
- vSphere host(s) information
 - vSphere 7.0 or later
- iSCSI VMKernel adapter IP information
- Network switch(es)
 - With ONTAP system network data ports and connected vSphere hosts
 - VLAN(s) configured for iSCSI
 - (Optional) link aggregation configured for ONTAP network data ports
- ONTAP Tool for VMware vSphere deployed, configured, and ready to consume

Steps

1. Check compatibility with the [Interoperability Matrix Tool \(IMT\)](#).
2. [Verify that the iSCSI configuration is supported.](#)
3. Complete the following ONTAP and vSphere tasks.

ONTAP tasks

1. [Verify the ONTAP license for iSCSI.](#)
 - a. Use the `system license show` command to check if iSCSI is listed.
 - b. Use `license add -license-code <license code>` to add the license.
2. [Verify that the iSCSI protocol is enabled on the SVM.](#)
3. Verify that iSCSI network logical interfaces are available on the SVM.

When an SVM is created using the GUI, iSCSI network interfaces are also created.

4. Use the `Network interface` command to view or make changes to the network interface.

Two iSCSI network interfaces per node are recommended.

5. [Create an iSCSI network interface.](#) You can use the `default-data-blocks` service policy.
6. [Verify that the data-iscsi service is included in the service policy.](#) You can use `network interface service-policy show` to verify.
7. [Verify that jumbo frames are enabled.](#)
8. [Create and map the LUN.](#) Skip this step if you are using ONTAP tools for VMware vSphere. Repeat this step for each LUN.

VMware vSphere tasks

1. Verify that at least one NIC is available for the iSCSI VLAN. Two NICs are preferred for better performance and fault tolerance.
2. [Identify the number of physical NICs available on the vSphere host.](#)
3. [Configure the iSCSI initiator.](#) A typical use case is a software iSCSI initiator.
4. [Verify that the TCP/IP stack for iSCSI is available.](#)
5. [Verify that iSCSI portgroups are available.](#)
 - We typically use a single virtual switch with multiple uplink ports.
 - Use 1:1 adapter mapping.
6. Verify that iSCSI VMKernel adapters are enabled to match the number of NICs and that IPs are assigned.
7. [Bind the iSCSI software adapter to the iSCSI VMKernel adapter\(s\).](#)
8. [Provision the VMFS datastore with ONTAP Tools.](#) Repeat this step for all datastores.
9. [Verify hardware acceleration support.](#)

What's next?

After these the tasks are completed, the VMFS datastore is ready to consume for provisioning virtual machines.

Ansible Playbook

vSphere VMFS Datastore - NVMe/FC with ONTAP

About this task

This section covers the creation of a VMFS datastore with ONTAP storage using NVMe/FC.

For automated provisioning, use one of these scripts: [\[PowerShell\]](#), [Ansible Playbook](#), or [\[Terraform\]](#).

What you need

- Basic skills needed to manage a vSphere environment and ONTAP.
- [Basic understanding of NVMe/FC](#).
- An ONTAP Storage System (FAS/AFF/CVO/ONTAP Select/ASA) running ONTAP 9.8 or later
- ONTAP credentials (SVM name, userID, and password)
- ONTAP WWPN for host, target, and SVMs and LUN information
- [A completed FC configuration worksheet](#)
- vCenter Server
- vSphere host(s) information (vSphere 7.0 or later)
- Fabric switch(es)
 - With ONTAP FC data ports and vSphere hosts connected.
 - With the N_port ID virtualization (NPIV) feature enabled.
 - Create a single initiator target zone.
 - Create one zone for each initiator (single initiator zone).
 - For each zone, include a target that is the ONTAP FC logical interface (WWPN) for the SVMs. There should be at least two logical interfaces per node per SVM. DO not use the WWPN of physical ports.

Provision VMFS datastore

1. Check compatibility with the [Interoperability Matrix Tool \(IMT\)](#).
2. [Verify that the NVMe/FC configuration is supported](#).

ONTAP tasks

1. [Verify the ONTAP license for FCP.](#)

Use the `system license show` command and check if NVMe_oF is listed.

Use `license add -license-code <license code>` to add a license.

2. Verify that NVMe protocol is enabled on the SVM.

- a. [Configure SVMs for NVMe.](#)

3. Verify that NVMe/FC Logical Interfaces are available on the SVMs.

- a. Use `Network Interface show` to verify the FCP adapter.

- b. When an SVM is created with the GUI, logical interfaces are as part of that process.

- c. To rename the network interface, use the command `Network Interface modify`.

4. [Create NVMe namespace and subsystem](#)

VMware vSphere Tasks

1. Verify that HBA drivers are installed. VMware supported HBAs have the drivers deployed out of the box and should be visible at [Storage Adapter Information](#)

2. [Perform vSphere Host NVMe driver installation and validation tasks](#)

3. [Create VMFS Datastore](#)

vSphere traditional file storage provisioning with ONTAP

VMware vSphere supports following NFS protocols, both of which support ONTAP.

- [NFS Version 3](#)
- [NFS Version 4.1](#)

If you need help selecting the correct NFS version for vSphere, check [this comparison of NFS client versions](#).

Reference

[vSphere datastore and protocol features: NFS](#)

vSphere NFS datastore - Version 3 with ONTAP

About this task

Creation of NFS version 3 datastore with ONTAP NAS storage.

For automated provisioning, use one of these scripts: [\[PowerShell\]](#), [Ansible Playbook](#), or [\[Terraform\]](#).

What you need

- The basic skill necessary to manage a vSphere environment and ONTAP.
- An ONTAP storage system (FAS/AFF/CVO/ONTAP Select/Cloud Volume Service/Azure NetApp Files) running ONTAP 9.8 or later
- ONTAP credentials (SVM name, userID, password)
- ONTAP network port, SVM, and LUN information for NFS

- [A completed NFS configuration worksheet](#)
- vCenter Server credentials
- vSphere host(s) information for vSphere 7.0 or later
- NFS VMKernel adapter IP information
- Network switch(es)
 - with ONTAP system network data ports and connected vSphere hosts
 - VLAN(s) configured for NFS
 - (Optional) link aggregation configured for ONTAP network data ports
- ONTAP Tool for VMware vSphere deployed, configured, and ready to consume

Steps

- Check compatibility with the [Interoperability Matrix Tool \(IMT\)](#)
 - [Verify that the NFS configuration is supported.](#)
- Complete the following ONTAP and vSphere tasks.

ONTAP tasks

1. [Verify the ONTAP license for NFS.](#)
 - a. Use the `system license show` command and check that NFS is listed.
 - b. Use `license add -license-code <license code>` to add a license.
2. [Follow the NFS configuration workflow.](#)

VMware vSphere Tasks

[Follow the workflow for NFS client configuration for vSphere.](#)

Reference

[vSphere datastore and protocol features: NFS](#)

What's next?

After these tasks are completed, the NFS datastore is ready to consume for provisioning virtual machines.

vSphere NFS Datastore - Version 4.1 with ONTAP

About this task

This section describes the creation of an NFS version 4.1 datastore with ONTAP NAS storage.

For automated provisioning, use one of these scripts: [\[PowerShell\]](#), [Ansible Playbook](#), or [\[Terraform\]](#).

What you need

- The basic skills necessary to manage a vSphere environment and ONTAP

- ONTAP Storage System (FAS/AFF/CVO/ONTAP Select/Cloud Volume Service/Azure NetApp Files) running ONTAP 9.8 or later
- ONTAP credentials (SVM name, userID, password)
- ONTAP network port, SVM, and LUN information for NFS
- [A completed NFS configuration worksheet](#)
- vCenter Server credentials
- vSphere host(s) information vSphere 7.0 or later
- NFS VMKernel adapter IP information
- Network switch(es)
 - with ONTAP system network data ports, vSphere hosts, and connected
 - VLAN(s) configured for NFS
 - (Optional) link aggregation configured for ONTAP network data ports
- ONTAP Tools for VMware vSphere deployed, configured, and ready to consume

Steps

- Check compatibility with the [Interoperability Matrix Tool \(IMT\)](#).
 - [Verify that the NFS configuration is supported.](#)
- Complete the ONTAP and vSphere Tasks provided below.

ONTAP tasks

1. [Verify ONTAP license for NFS](#)
 - a. Use the `system license show` command to check whether NFS is listed.
 - b. Use `license add -license-code <license code>` to add a license.
2. [Follow the NFS configuration workflow](#)

VMware vSphere tasks

[Follow the NFS Client Configuration for vSphere workflow.](#)

What's next?

After these tasks are completed, the NFS datastore is ready to consume for provisioning virtual machines.
